MARKED-UP VERSION OF AMENDED SPECIFICATION

Please make changes to the specification as follows:

IN THE SPECIFICATION:

Please amend the paragraph starting at page 4, line 5, with the following:

In response As to a stroke operation, the system may drag an object, may maintain a current state or operation, or being perform inking. Inking may include writing, drawing, or adding annotations as described in greater detail in U.S. Serial No. 60/212,825, filed June 21, 2000, entitled "Methods for Classifying, Anchoring, and Transforming Ink Annotations" and incorporated by reference.

Please amend the paragraph starting at page 10, line 17, with the following:

If the first threshold has been exceeded, then the system proceeds to step 304 where the user's input is classified as a stroke and the system steps to point A 305. If the first threshold has not been exceeded, the system determines if the stylus was still in contact with the digitizer when a time threshold had expired in step 306. If no (meaning that the stylus was not still in contact with the digitizer surface), the system classifies the input as a tap in step 307 and proceeds to point B 308.

IN THE CLAIMS:

Please amend the claims as follows:

1.   A method for operating a digitizer capable of measuring the duration of a user input and capable of detecting movement, comprising the steps of:

receiving user input;

classifying the user input by using at least one of a time threshold and a movement threshold; and,

performing an action based on the user input.
